

# Tsukuba Global Science Week 2014

## Solutions to Global Issues

-Exploring Peace & Sustainability  
through Science, Sports, & Arts-

Sep 28-30 2014

*University of Tsukuba*  
*University Hall*

Participation Fee  
To Be Announced

The human kind is facing various global issues such as food crisis, nuclear issues, environment problems, and declining birth rate/aging population/stratified society. It is necessary for human kind to explore in finding the solutions to these growing issues by integrating fields of public health, medical sciences, sports science, food science, information science, politics and economics, arts, humanities, etc. Collaborative framework in borderless/international scale is fundamental and essential. Just as Japan has been selected as the host nation of 2020 Olympics, our partner institutions and the University of Tsukuba are highly expected to "Imagine the Future" and take further actions to disseminate its research outcomes worldwide to contribute to provide solutions to these global issues.

TGSW 2014 will be an excellent opportunity to disseminate our leading-edge research and creative activities to the public, and have active discussions in various academic fields, for the above-stated objectives.
